

Rates of fatal injuries to workers 15 to 19 years old for all industries and the agricultural production industry, 1992–1996 and 1997–2002

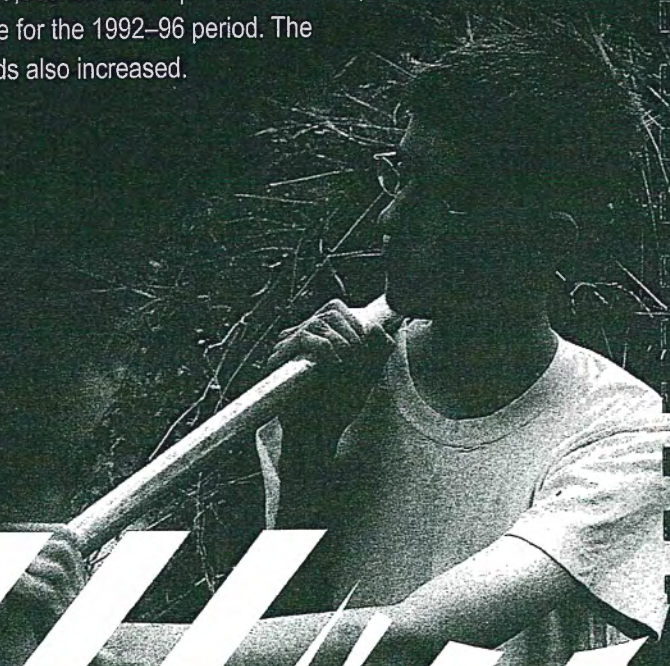

NOTE: Numbers and rates may differ from previously published BLS CFOI numbers and rates.
SOURCE: Hard, David L., and John R. Myers. "Fatal Work-related Injuries in the Agriculture Production Sector among Youth in the United States," *Journal of Agromedicine*, vol. 11, no. 2, pp. 57–65.

chart 26

For comparison purposes and to assess the trend in fatalities for young workers, rates from 1992 to 1996 (5 years) and from 1997 to 2002 (6 years) were calculated with the use of both CFOI injury data and hours-worked data from the Current Population Survey.

Although the overall industry rates were lower during the 1997–2002 part of the study period for all workers aged 15 to 19 years, the rates for both agricultural production and its subindustries (crop production and livestock production) increased.

For young workers in agricultural production, three of the five age groups had increased rates in the 1997–2002 period. The rate for 15-year-olds during that period was 24.1 per 100,000 full-time equivalent workers, an 81% increase over their rate for the 1992–96 period. The rates for 16- and 19-year-olds also increased.

Fatal Workplace Injuries in 2005: A Collection of Data and Analysis

This report was prepared in the Office of Compensation and Working Conditions under the administration of Associate Commissioner William Wiatrowski and the direction of John Ruser, Assistant Commissioner for Safety, Health, and Working Conditions, and Katharine Newman, Chief for the Division of Safety and Health Program Analysis and Control. Scott Richardson, CFI Program Manager, supervised the preparation of the report by staff members Dino Drudi, Gregory Fayard, Matt Gunter, Samuel Meyer, Joyce Northwood, and Stephen Pegula. The report was designed by Keith N. Tapscott of the Office of Publications and Special Studies. Production was by Edith S. Baker, of the same office. Many other organizations contributed to the success of the census, including the participating State and local agencies that collected the data, the BLS regional offices that helped review and process the data, and the BLS Office of Field Operations, whose staff oversaw the census' implementation in the regions and States.
